

New assignment 13K13;

Note: The website **www.13k13.com** needs to be completely redesigned. Because now it has an ugly design. Everything step by step.

What must be done first;

1: New design must be entered **see folder** with the NEW design photos. What new design should come. See below

a: The home page

b: Dashboard must be entered

When you log in you will go directly to the dashboard page

c: Enter new profile. (**Note**) There are 2 types of profiles with and without banner.

Note: there is now a profile created by the previous webdesign which is very ugly.

D: Upload video, page

2: You can already create a profile with the old design.

You should now also be able to create a profile with the new design. You have to take care of that

3: Everything should be linked automatically

a: When you upload a video, that new video should be immediately visible on the front page. That is the page that visitors see first.

That is already happening.

b: When you create an account, it must be immediately visible in Discover accounts on the frontpage

c: If a video gets a lot of likes, it must be seen at **TRENDING VIDEO** on the frontpage

4: Sign up and log in pop up windows. Should get the new design. **See photos** in the folder

5:Notes

Note1: Some features are not yet active. That happens in the following tasks.

Note2: Can you also make a few fake profiles on the website to fill the website a bit. And also to test some functions.

Note3: The links at the top of the page to **upload a video** are incorrect.

You have to use the links you see in other pictures.

I'm talking about the links:

Home- Discover-Live stream-Cinema-Inbox-My network-

Note4: I have XD files that you can easily use for web design. When you start the assignment I'll send them to you.

Note5: You need to upload everything to your server first. You can download them from my GITHUB account.

When everything is ready. I pay via Paypal first. And then you upload the new code in my GITHUB and AWS
